PUBLIC WORKS & ADMINISTRATION

FUEL-IT
Fuel Dispensing Monitoring & Reporting

Designed for Municipal & Construction Remote Fuel-Fill Sites
No fill-site equipment or on-site power required

KNOW EVERY FUEL EVENT - By fill site. By vehicle. Automatically.

- ✓ Who dispensed fuel - and when
- ✓ How much fuel entered each vehicle
- ✓ The specific remote fill location
- ✓ Vehicle and estimated site-tank levels
- ✓ Whether the vehicle was authorized
- ✓ Kilometres between fills to flag unusual activity

HOW IT WORKS

A ConX GPS visibility device reports the vehicle's normal activity and current fuel-tank level. The driver fuels as usual - with no keypad, paper log or equipment installed at the remote site.

THE PROCESS

- 1 Vehicle #144 arrives at the remote fuel compound.
- 2 The ConX device reports the vehicle's arrival.
- 3 The driver completes the routine fuel-fill process.
- 4 Departure is reported automatically - no written fuel slip required.

Routine fueling stays routine. Reporting becomes automatic.

WHAT THE SERVER RECORDS

- IN** Fuel level and odometer reading at arrival
- OUT** Fuel level and odometer reading at departure

WHAT YOU WILL NOW KNOW

- Who took fuel, when and how much
- Estimated fuel remaining in the on-site tank
- When a low site-tank threshold is reached
- Real-time fuel level for each equipped vehicle

Low-fuel notifications help trigger timely site-tank refilling.

FUEL-IT SYSTEM INVESTMENT

\$0 SITE EQUIPMENT
No Equipment Required

\$0 GPS DEVICE
Free-to-Use Hardware

\$19/mth/unit GPS Service
Paid Annually + \$3 Fuel Monitoring

LIFETIME WARRANTY
