

NEW FEATURE!

ROAD SEGMENT ANALYTICS

(MILE-BY-MILE ROAD MAINTENANCE ACTIVITIES)

and here's why you want it ...

Our mile-by-mile Road Segment Analytics System collects, analyses and presents **all the activities of your road graders, hauler/gravel trucks, sanders, utility vehicles and more.**

A "Segment" is a section of road between 2 intersections

Through mapping and tables, each and every Segment is marked with:

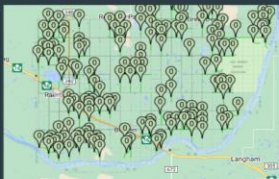

- Number of roadwork maintenance "visits"
- Type of maintenance performed
- Number of vehicles involved
- Total distance maintained
- Collective operational costs
- Total time of road maintenance performed

See where **ALL** work performed

This unprecedented data collection is invaluable when it's time to:

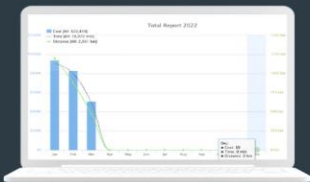

- Evaluate performance
 - Review how on-track you are with your existing budget
 - Create next year's budget
 - Ask for Government Grant Assistance
- Accurate fact reporting will help you get approvals

See where **NO** work performed

We can show you all the roads that have "not" received road servicing. You can:

- More easily plan future roadwork activities
- See a historical date of when work "was" last performed
- Possibly interpret these roads as "in good condition – no work required"
- See work that was missed or incorrectly reported as completed

Know What You Don't Know

"At-a-Glance" charts provide you a historical snapshot of all your Field Staffs' productivity including:

- Total productivity cost
- Total kms of work completed
- Total time applied to activities

No Questions Required

Councillors, Foremen & Administrators are **all in the loop!**

Easy-to-review reporting provides your organization with **the answers that get asked** regarding municipal work performed.

Better Data Provides Better Decisions
