

TITO

TIME-IN/TIME-OUT
ON-SITE ATTENDANCE SYSTEM

REAL-TIME & HISTORICAL EMPLOYEE ATTENDANCE MONITORING

DESIGNED FOR MUNICIPALITIES, CONSTRUCTION INDUSTRY, & COMMERCIAL ENTITIES

WHAT IS TITO?

The TITO (Time In/Time Out) system makes employee time tracking effortless. Using color-coded fobs, staff can quickly clock in and out with a single tap — no apps, no complicated software.

SYSTEM BENEFITS & FEATURES

Easy 1-Step Operation: Clock in and out with a simple key fob tap

Real-Time Reporting: Web-based event reports and notifications keep you up to date

Accurate Oversight: Minimize overtime costs with precise, verifiable time records

Flexible Tracking: Supports both shop-based clock-ins and mobile staff (GPS add-on sold separately)

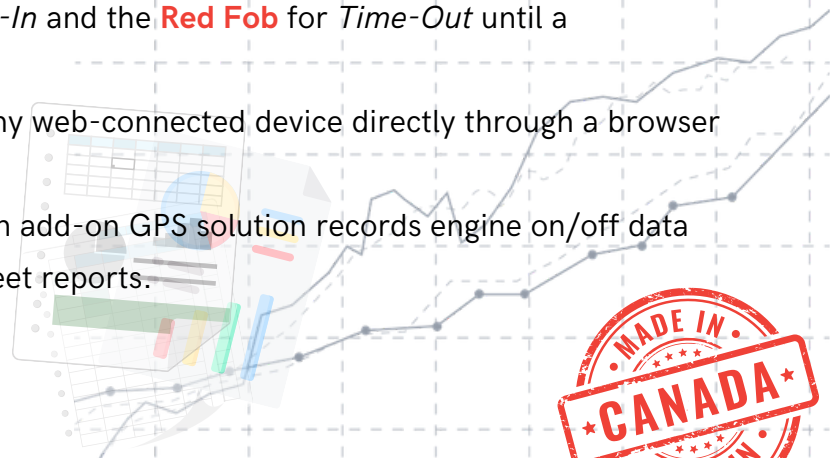

Payroll Integration: Export reports quickly for seamless payroll processing

Customizable Reports: Filter by date, site, worker, or group for detailed insights

HOW IT WORKS

- Each staff member receives a **Red Fob** and a **Green Fob** (system includes fobs for 5 staff).
- The TITO Device with built-in fob reader is mounted at the designated clock-in/out location.
- To record time, staff tap the **Green Fob** for *Time-In* and the **Red Fob** for *Time-Out* until a confirmation beep is heard.
- Administrators can access historical reports on any web-connected device directly through a browser — no apps or special software required.
- For staff who don't start their shift at the shop, an add-on GPS solution records engine on/off data from their vehicle to automatically create timesheet reports.
